

CONCUSSION MANAGEMENT POLICY

The Board of Education of the Kingston City School District recognizes that concussions and head injuries are commonly reported injuries in children and adolescents who participate in sports and recreational activities and can have serious consequences if not managed carefully. Therefore, the District adopts the following policy to support the proper evaluation and management of head injuries.

Concussion is a mild traumatic brain injury. Concussion occurs when normal brain functioning is disrupted by a blow or jolt to the head. Recovery from a concussion will vary. Avoiding re-injury and over-exertion until fully recovered are the cornerstones of proper concussion management.

While district staff will exercise reasonable care to protect students, head injuries may still occur. Physical education teachers, coaches, nurses and other appropriate staff will receive training to recognize the signs, symptoms and behaviors consistent with a concussion. Any student exhibiting those signs, symptoms or behaviors while participating in a school sponsored class, extracurricular activity, or intramural/interscholastic athletic activity shall be removed from the game or activity and be evaluated as soon as possible by an appropriate health care professional. The health care professional, coach or club advisor will notify the student's parents or guardians of the injury, and recommend in writing the appropriate evaluation, monitoring and follow-up.

If a student sustains a concussion at a time other than when engaged in a school-sponsored activity, the district expects the parent/legal guardian to report the condition to the appropriate school nurse so that the district can support the proper management of the condition.

The student shall not return to school or activity until authorized to do so by an appropriate health care professional. The school's physician or his/her designee will make the final decision on return to activity including physical education class and after-school sports. Any student who continues to have signs or symptoms upon return to activity must be removed from play and reevaluated by their health care provider.

The Superintendent, in consultation with appropriate district staff, including the school physician or his/her designee, will develop regulations and protocols to guide the return to activity. Said regulations will include a parent/guardian sign-off, which acknowledges the student's return to activity based upon district protocols.
